Missouri organizations participated in ECHO

MISSOURI IS GLOBAL LEADER FOR ECHO

Show-Me ECHO is one of 13 global superhubs for training others to create ECHOs. It has launched some of the first and only ECHOs in such areas as opioid use, rural veterans behavioral health, developmental disabilities and kidney disease. New ECHOs are addressing pressing health needs.

Autism Asthma Psychiatry

'There is a huge need for pediatric providers in rural settings to be better educated in identifying characteristics and to be able to screen in order to initiate therapies early. I participate because it is a support resource, links me to the professionals who educate and guide me in the care of my patients.'

Autism Participant

'As a relatively new Family Medicine MD in rural Missouri, I have encountered child psych issues often, and frequently am in a situation where a psychology or psychiatry referral could take 2-3 months or longer. I hope to improve my knowledge and competence in child psych care. I hope to make more accurate diagnoses, possibly start medications as appropriate, and get these patients plugged into local resources earlier to assist with their treatment.'
